Investment Name _____ Investment Description _____ Investment Name _____

[illegible]

There is a lot of good research on this. The bottom line is that there is a lot of good research on this. The bottom line is that there is a lot of good research on this.

The coefficients within each cell are the coefficients (intercept and slope) estimated separately for each group within the corresponding outcome. These coefficients may include confidence intervals and standard errors.

The stability and validity of a generalised growth characterisation solution is here investigated by means of a perturbation analysis for the solution of the coupled differential equations and using the asymptotic expansion technique.
